A practical bridge from learning to civic work.

A manager-ready 60-day pilot proposal for college career services and a city workforce or HR team. No institution or employer has committed.

25 adult learners	25 reviewed opportunities	60 days	$6,240
Proposed, voluntary cohort	Independent source checks	Bounded test and report	Total economic estimate

The intervention

Start from a real official opportunity. Make selected requirements and substitutions visible. Help a learner prepare a truthful work sample, open questions and an advisor handoff. Unknown facts remain unknown; the employer determines eligibility.

The college and city have distinct jobs

Owner	Accountability before launch
College career services	Recruit fairly; offer accessible consent and equal human advising; keep scheduling information separate from evaluation IDs.
City workforce / HR reviewer	Validate complete source conditions, substitutions and documents; resolve ambiguity; approve or withhold selected mappings.
Content steward + maintainer	Keep 25 records current, record review decisions, repair defects and preserve rollback. No automatic date renewal.
Evaluator + access reviewer	Freeze equal-information tasks, counterbalance order, score independently and test paper/assistive routes.

Four gates, not an implied partnership

Days 1-14	Days 15-28	Days 29-56	Days 57-60
Agree roles and governance; double-review sources.	Approve consent, accessibility and frozen tasks.	Run voluntary sessions and optional 14-day follow-up.	Report errors, access barriers, workload and go/no-go.

Decision requested

Identify a willing campus lead and municipal reviewer for a scoped co-design conversation. Confirm staff availability, rates and approvals before recruiting. This packet does not request a hiring commitment or claim validated career gains.

Measure usefulness. Account for the real cost.

The product can support a test; a polished prototype cannot substitute for independent people, consent and source adjudication.

What success would mean - proposed thresholds

Outcome	Measure and safeguard
Source correctness	At least 90% correct criterion/source judgments; separately count every missed mandatory condition and false definite eligibility statement (target zero).
Actionable plans	At least 80% of task starters score 4/5 on source identity, condition distinction, honest uncertainty, plausible artifact and dated next action. Two blinded raters reconcile.
Follow-through	At least 60% of consenting follow-up learners report their chosen next action within 14 days. Distinguish self-report from advisor confirmation.
Access and workload	Zero unresolved blocking barriers; median advisor review at most 15 actually measured minutes. Report missing work, assistance and withdrawals.

Budget assumptions (USD)

Illustrative resource	Hours / assumption	Economic cost
Campus lead / advisor	32 h at $50	$1,600
Municipal reviewer	16 h at $60	$960
Content steward	20 h at $35	$700
Technical maintainer	20 h at $60	$1,200
Independent evaluator	16 h at $50	$800
Accessibility reviewer	8 h at $60	$480
Participant compensation + materials/access reserve	25 x $15 plus $125	$500
Total	112 staff hours	$6,240

Cash envelope: $500 only if all staff labor is contributed. Rates, accommodations and institutional overhead need host confirmation. No funds are committed or spent by this proposal.

Consent, privacy and access

Use fictional tasks and pseudonymous evaluation IDs; collect no private student, patient or job-seeker records in the public app. Participation is voluntary and independent of services. Offer paper/telephone support and devices; test actual assistive technology. Keep contact linkage in approved host systems; delete linkage/raw feedback within 90 days unless approved policy requires otherwise.

Current evidence and honest limits

Independent unfamiliar participants: n=0. No partner commitment, measured hiring effect or causal speed gain. Internal tests verify software behavior. A small pilot would support descriptive findings, not subgroup parity or employment causality.
